This is also true for the friezes as well. Many of the friezes for hexaflexagons of large numbers of sides will twist back and around on themselves. An example of this is on the page for the 12 sided Zodiac flexagon model of this website. Sometime I will write up an advanced hexagon creation article to cover these cases and a few other topics.

The Flexagon Portal - Hexaflexagons

In geometry, flexagons are flat models, usually constructed by folding strips of paper, that can be flexed or folded in certain ways to reveal faces besides the two that were originally on the back and front. Flexagons are usually square or rectangular (tetraflexagons) or hexagonal (hexaflexagons). A prefix can be added to the name to indicate the number of faces that the model can display, including the two faces (back and front) that are visible before flexing.

Flexagons: In geometry, flexagons are flat models-paper polygons, usually constructed by folding strips of paper. They can be flexed or folded in certain ways to reveal the multiple faces. The flexagon rotates when the outer points are pushed to the center. Flexagons are usually square, rectangular (tetraflexagons), or hexagonal (hexaflexagons). We are creating a hexaflexagon.
