Overcome the fears and doubt associated with your bioenergy project is through a Feasibility Study. In fact, most banks and lenders require a Feasibility Study, validated by a third-party, prior to committing funds for the project. (More information on validation can be found here)

With a feasibility study by HoSt of your bioenergy project, the feasibility of a particular project is elaborated. For complex projects, further research is often necessary to determine the technical and economic feasibility. Depending on the project, different measurements or tests can be executed. Additionally, suppliers are contacted and a part of the engineering can be carried out.

Feasibility Study - from ideas to concrete projects | HoSt

Read PDF Feasibility Study Of Bioenergy And Food

A biomass facility at MR, as conceived for this study, would consume 24,500 to 26,000 bone dry tons¹(BDT) of fuel annually depending on whether it was a stand-alone²plant or a cogeneration plant, respectively. Thus, the amount of fuel that would be consumed by the plant annually is substantially lower than the estimated annual supply.

Feasibility Study of The Great Lakes Bioenergy System

Technologies considered in renewable energy feasibility studies. As part of our study, we look into the viability of a wide range of renewable energy technologies for both new-build and existing buildings and sites. These include: Solar thermal. Solar photovoltaic panels. Wind turbines. Ground source heating and cooling. Air-source heating and cooling.

Feasibility study - GOV.UK

Considering the scattered distribution of ROW lands, successful management of biomass production supply chain is a key challenge when developing a viable system at the state level. The overall objective of this study is to evaluate the feasibility of growing energy crops along Illinois highways and provide decision support to the stakeholder.
