The Food Chain Gizmo™ shows a food chain with hawks, snakes, rabbits, and grass. In this simulation, the hawks eat snakes, the snakes eat rabbits, and the rabbits eat grass. 1.

Student Exploration Gizmo Answer Key Food Chain

A food chain is the sequence of who eats whom in a biological community (an ecosystem) to obtain nutrition. A food chain starts with the primary energy source, usually the sun or boiling-hot deep sea vents. The next link in the chain is an organism that makes its own food from the p̄rimary energy source an example is

Neshaminy School District—Overview

The food chain describes who eats whom in the wild. Every living thing—from one-celled algae to giant blue whales—needs food to survive.Each food chain is a possible pathway that energy and nutrients can follow through the ecosystem. For example, grass produces its own food from sunlight. A rabbit eats the grass.

Food Chain | National Geographic Society

Glencoe

Glencoe

(KEY) food chain. Terrestrial organisms can and do suffer from DDT contamination. However, DDT does not remain on land the way it collects in water ecosystems. Thus land organisms tend to be exposed to less DDT over time and concentrate less DDE in their tissues. Therefore the food sources of the northern harrier

Lesson 2: Food Webs, Bioaccumulation, and Visualizing Data

Ecosystems, food chains and food webs. New York State Learning Education Standards and Core Curriculum. Understanding food chains and food webs requires understanding the flow of energy and food sources among living things on Earth. A food chain represents a series of organisms connected by where they obtain their energy.
