Formwork A Guide To Good Practice
Formwork is the general term given to the mould into which concrete is poured. It is generally made of timber or steel, the surface in contact with the concrete being selected to give the required finish. The strength of the formwork and its associated falsework must be sufficient to support the weight of the wet concrete without significant distortion.

What is Formwork?
The TWI Guidance is not a design code, but is intended to be used in conjunction with the current British Standards and other referenced documents as a guide to good practice in the design of a hoarding. The hoarding designer is not precluded from using other codes and methods of design.
