**Home - The Global Fund to Fight AIDS, Tuberculosis and Malaria**  
Tuberculosis is spread from one person to the next through the air when people who have active TB in their lungs cough, spit, speak, or sneeze. People with latent TB do not spread the disease. Active infection occurs more often in people with HIV/AIDS and in those who smoke.

**Tuberculosis - Wikipedia**  
HIV/TB infection is a bi-directional interaction of the two pathogens. TB disease appears when the immune response is unable to stop the growth of mycobacteria. The cytokine IFN-γ plays a pivotal role in signaling of the immune system during infection. Reduced production of IFN-γ or its cellular receptors lead to severe and fatal TB.

**Tuberculosis in relation to HIV - Wikipedia**  
• Tuberculosis (TB) is one of the most common co-infections that people living with HIV can develop. • Testing for TB can be easily done with a blood test or by taking a sample of mucus or other bodily fluid. • If you are diagnosed with active TB, you will be offered treatment with a course of antibiotics.

**Tuberculosis and HIV co-infection | Avert**  
Tuberculosis (TB) is a potentially serious infectious disease that mainly affects your lungs. The bacteria that cause tuberculosis are spread from one person to another through tiny droplets released into the air via coughs and sneezes. Once rare in developed countries, tuberculosis infections began increasing in 1985, partly because of the emergence of HIV, the virus that causes AIDS. HIV ...

A continuation phase of INH and a rifamycin for the last 4 months.

**Treatment of Persons Living with HIV | Treatment | TB | CDC**  
Tuberculosis (TB). In resource-limited nations, TB is the most common opportunistic infection associated with HIV. It's a leading cause of death among people with AIDS.

**HIV/AIDS - Symptoms and causes - Mayo Clinic**  
In 1986 some of the facts about HIV/AIDS were very unclear. It was similar to how in 2020 some of the facts about coronavirus and covid-19 are still unclear. In fact many women were becoming infected by HIV and some of what was being said in the media was incorrect. Of course in those days we had no internet and no social media. So, never having written any leaflet before, I decided in 1986 to ...

**History of the HIV & AIDS charity AVERT**  
If drug supply chains are not maintained, countries with high HIV prevalence could see a substantial rise in AIDS deaths from even a short-term interruption." For TB, the greatest impact is likely to be from reductions in timely diagnosis and treatment of new cases, which may result from a long period of COVID-19 suppression interventions ...
