Harry's eyes are often referred to in the books. Harry has green eyes. His mother had green eyes and his father had hazel eyes. Eye color is a case of codominance. Blue eyes (i) are recessive to both brown eyes (I^B) and green (I^G). When green and brown are both present, hazel eyes result. Draw a punnett square to show the odds of Harry inheriting green eyes.

According to J. K. Rowling, nobody knows where magic comes from. Therefore, it is unknown whether or not the ability to use magic is solely biological, stemming from unknown biological processes, or if magic is an external force that wizards are merely genetically predisposed to connect with. Since Voldemort's ability to use magic survived with his soul, it can be assumed that magical ability has a connection to the soul.
