## Geophysical Inverse Theory and Regularization Problems ...

The book brings together fundamental results developed by the Russian mathematical school in regularization theory and combines them with the related research in geophysical inversion carried out in the West. It presents a detailed exposition of the methods of regularized solution of inverse problems based on the ideas of Tikhonov regularization, and shows the different forms of their applications in both linear and nonlinear methods of geophysical inversion.

Geophysical inversion is an important technique to estimate sub-surface models from observed geophysical data. Most geophysical inversion problems are ill-posed because of incorrect formulation of the problems (Tikhonov 1963) and inaccurate and insufficient data (Jackson 1972). Regularization, first introduced by Tikhonov
