real-world project. Along the way, it touches on advanced topics like testing, continuous integration, and monitoring code quality.

Manning | Gradle in Action
To summarize, Gradle is an enterprise-ready build system, powered by a declarative and expressive Groovy DSL. It combines flexibility and effort-less extendibility with the idea of convention over configuration and support for traditional dependency management.

The SonarScanner for Gradle provides an easy way to start SonarQube analysis of a Gradle project. The ability to execute the SonarQube analysis via a regular Gradle task makes it available anywhere Gradle is available (developer build, CI server, etc.), without the need to manually download, setup, and maintain a SonarQube Runner installation.

Gradle plugins act as enablers to automate these tasks. A plugin extends your project by introducing domain-specific conventions and tasks with sensible defaults. One of the plugins that Gradle ships with is the Java plugin. The Java plugin goes far beyond the basic functionality of source code compilation and packaging.
