Hi David, the most common example of C&S is a speculative office building - owner designs and builds the base building, but the use and design of the tenant spaces is not known until

Access Free Green Building And Leed Core

tenants sign leases and move in. So the basic purpose of LEED-CS is to certify the building based on what the owner does control without considering tenant spaces.

LEED for Core & Shell is used when a
project owner or developer only
controls the design and construction of
the building's core and shell such as

Access Free Green Building And Leed Core

mechanical, electrical and plumbing systems as well as its envelope. LEED for Core & Shell is appropriate to use if more than 40% of the gross floor area is incomplete when the project is certified.
