plants. The Orchidaceae family includes over 27,000 botanical species and several times more hybrids.

The OrchidGarden. We grow botanical and hybrid orchids.
Orchids generally prefer bright but filtered light. They need protection from direct sunshine. Watering, humidity and feeding. Orchids prefer high air humidity, but their roots will rot easily in wet compost. Water them about once a week, ideally using tepid rainwater. Water from above and tip out any water that collects in the saucer under the pot.

Orchid Extravaganza - Ashwood Nurseries

In order to mimic their preferred growing conditions, orchids should be potted in a specialist orchid compost or a mix of moss, bark chips and perlite. Orchids living on branches get soaked regularly by tropical storms, but the water quickly drains away, and orchid compost is similarly free-draining.

Gardeners' World Magazine

But, broadly speaking, grow in specialist orchid compost, avoid watering too much, and feed with orchid fertiliser from spring until autumn. Most orchids like bright but indirect light - an east or west-facing windowsill is often perfect. Too much light can scorch the leaves, so don't stand in direct sunshine.
