## Flash Guide Number - The Digital SLR Guide

The flash guide number (GN) is a measure of the distance at which the flash can illuminate a subject. The higher the guide number, the greater the distance at which the light from the flash is sufficient for optimal

exposure. The formula for calculating the guide number is as follows: Guide number (GN)=distance (meters) × aperture (f-number)

---

## Flash Level (Guide Number) - Nikon | Imaging Products

Guide Number is a solution to deal with the Inverse Square Law. Flash intensity falls off with distance. Guide Number (GN) is a numerical method used to determine exposure of direct flash for Manual flash power levels, to automatically deal with the Inverse Square Law, making the math be trivial.

number of your flash.  $GN = \text{distance} * f\text{-stop}$ . Your flash 's Guide Number (GN) is determined at 100 ISO, when it gives correct exposure at a certain distance, multiplied by the f-stop

---

Tutorial: How to use the guide number of your flash - Tangents  
In short, guide numbers on a flash indicate how much light that flash can produce. You ' ll see them in the specs indicated in either meters or feet. The higher the guide number the further the flash will reach. The specifications will also show the flash settings at which the guide number is calculated, including the ISO and flash zoom setting.

# Download Free Guide Number Flash

Flash - Calculator ...

A flash ' s power is determined by its Guide Number, with low Guide Numbers (GN) indicating a weak or less powerful flash than one with a high GN. For ease of comparison, most flash GNs are rated for an ISO 100 film. If you use a film with a lower ISO the GN will be lower, and, conversely, if you use a higher speed film the GN will be higher.

---

## Flash Photography - Understanding Guide Numbers

Guide Number simply is the multiplied product of (flash distance x f/stop) for a proper exposure situation (normally specified for ISO 100). For example, if a certain Guide Number were equal to 100 (feet), then it says a correct direct flash exposure is f/20 at 5 feet, or f/5

# Download Free Guide Number Flash

at 20 feet, or f/10 at 10 feet, etc.

---

Compare Power Rating of Camera  
Flashes with Guide Numbers

GN = Subject Distance from Flash  
Source x f/Stop. Guide numbers are  
based on a simple mathematical  
equation that states: the light output  
of an electronic flash is equal to the  
distance of the flash unit from the  
subject multiplied by the lens  
aperture, or f/stop.

---

Understanding Guide Numbers | B&H  
Explora

Specifically, a flash unit ' s guide  
number indicates how much light the  
unit will emit in relation to a standard  
film speed. The higher the guide  
number, the more powerful the flash.

This number is usually indicated in the owner's manual of the flash. It ' s represented as "GN 118 with ISO 100 film."

---

## Demystifying Flash Guide Numbers - Vivid

The effective range– and therefore the guide number– of any flash will be affected by the use of diffusers, soft boxes, or any other type of flash modifier, as well as whether the flash head is zoomed out or not. Also, remember that guide numbers are usually calculated based on a full-frame (35mm equivalent) sensor.

zoom set to 35mm/FX in normal evenness mode. With all this hoopla, it's only one sixteenth of a stop brighter than the SB800, which has a GN of 125 in the same setting.

---

### Nikon SB-900

Guide numbers are the standardized, numerical way of determining the power of a flash, with a higher guide number representing a more powerful flash. A guide number is the product of multiplying the f/stop of an exposure with a given distance, at ISO 100; or  $GN = f/\text{number} \times \text{distance}$ .
