### *Cervical Cancer Screening (Update) | ACOG*

Those aged 25 to 65 should have a primary HPV test\* every 5 years. If primary HPV testing is not available, screening may be done with either a co-test that combines an HPV test with a Papanicolaou (Pap) test every 5 years or a Pap test alone every 3 years. (\*A primary HPV test is an HPV test that is done by itself for screening.

Cervical cancer screening is used to find changes in the cells of the cervix that could lead to cancer. The cervix is the opening to the uterus and is located at the top of the vagina. Screening includes cervical cytology (also called the Pap test or Pap smear) and, for some women, testing for human papillomavirus (HPV).

## Guidelines For Pap Smears

### Acog

The American Cancer Society (ACS) has updated its guidelines for cervical cancer screening. The new guidelines are for people with a cervix with an average risk of cervical cancer. For people aged 25 to 65 years, the preferred screening recommendation is to get a primary human papillomavirus (HPV) test every 5 years.
