Fire-Resistant Drywall Panels | USG

Gypsum is noncombustible, which means that it contributes no fuel to a fire. As the chemical formula shows, gypsum contains 21% by weight chemically combined water, also called crystalline water that is part of the gypsum crystal itself. When gypsum drywall panels are exposed to fire, the heat of the fire converts the crystalline water to steam.

Fire Performance | USG

Great spaces begin with the sturdy walls that surround them. USG Boral supplies a range of lightweight and cost-effective interior lining to help you create, design, and build.
