Through a grant from the Bill and Melinda Gates Foundation, hand-operated seed cleaners were designed, fabricated, and tested by women farmers in the Kamuli district of Uganda. The machines were effective – cleaning soybeans and beans only took 10% of the time relative to that needed for hand winnowing and cleaning, and the number of people needed to clean the seeds were reduced by more than half.

This hand operated screen seed cleaner separates seeds from chaff by sifting. Seed and smaller materials drop through the screen into a tote bin below. Larger chaff (leaves, stems, pods and debris) retained by the screen discharge over the edge of the screen, outside the tote bin. It does not use a motor or engine, and

## Seed Processing Equipment

The 10t grain cleaner worked a treat for feeding the peanuts with its much larger opening. Because of the larger machine we needed a larger sample size and that caused an issue with the primary chute overflowing the bucket, causing some full peanuts to carry over to the third chute.
