Harmful Algae Blooms In Drinking

Blooms of blue-green algae, most common in the hot summer months, can endanger drinking water supplies by producing toxins. When ingested, these toxins can cause illness and even death. Humans and animals swimming in (or drinking water from) bodies of water with blue-green algae can present with symptoms ranging from liver damage to paralysis.

The Effects of Algae in Drinking Water | Sciencing

Harmful algal blooms (HABs) occurring in freshwater, and the associated toxins they produce, are dangerous to animals and humans. Mitigating the increasing presence of HABs presents a major challenge to water managers and drinking water utilities across the world.

Harmful Algae Blooms in Drinking Water: Removal of ...

Buy Harmful Algae Blooms in Drinking Water: Removal of Cyanobacterial Cells and Toxins (Advances in Water and Wastewater Transport and Treatment) 1 by Harold W. Walker (ISBN: 9781466583054) from Amazon's Book Store. Everyday low prices and free delivery on eligible orders.

Harmful Algae Blooms in Drinking Water: Removal of ...

The root cause of freshwater algal blooms is excess phosphorus loading from point (ie. wastewater treatment facilities) and non-point (ie. agricultural runoff) sources, which recently has been exacerbated by climate change. There are a variety of tools that can be used to protect drinking water systems against harmful algal blooms.

Harmful Algal Blooms – What’s in your drinking water ...

Cyanobacterial harmful algal blooms (CyanoHABs) have been increasing in severity and toxin production on the lake over the past five years. In September of 2013, the Ohio Environmental Protection Agency (Ohio EPA) placed a community under a "Do Not Drink" advisory due to the breakthrough of toxins into the finished public drinking water. Many of the treatment facilities on the lake were built before World War II and were designed for particulate removal.

Harmful Algal Blooms & Drinking Water Treatment | Water ...

Ultrasonic algae control specialist LG Sonic suggests its time to move on from using chemicals when managing this aspect of the environment. Usage of chemicals in lake management dates back to 1939. While its harmful effects have become increasingly apparent, it is still commonly used to diminish the impacts of algal blooms.

Chemical dosing contributes to harmful algal blooms, finds ...

At this time of the year, South Florida is often threatened with either blue-green algae or red algae blooms or both, collectively known as harmful algal bloom (HAB). We have been spared the wrath of both so far this year. Although they are lumped together under HAB, the two are not technically algae. The blue-green [...]
