that tell each part of your body what work to do, when to do it, and for how long. Hormones are vital to your health and well-being. Hormones are your body's chemical messengers. They travel in your bloodstream to tissues or organs to help them do their work.

Your Health and Hormones | Hormone Health Network
The endocrine system is a tightly regulated system that keeps the hormones and their effects at just the right level. One way this is achieved is through ' feedback loops '. The release of hormones is regulated by other hormones, proteins or neuronal signals. The released hormone then has its effect on other organs.
