Imidacloprid is an insecticide that was made to mimic nicotine. Nicotine is naturally found in many plants, including tobacco,

Imidacloprid Human Health And Ecological Risk Assessment

Read Online Imidacloprid Human Health And Ecological Risk Assessment

Imidacloprid is an insecticide approved for use in the EU with certain restrictions for flowering crops. It is highly soluble, non-volatile and persistent in soil. It is moderately mobile. It has a low risk of bioaccumulating. It is highly toxic to birds and honeybees. Moderately toxic to mammals and earthworms. It is non-toxic to fish.

Imidacloprid (Ref: BAY NTN 33893)

Four studies identified in this review reported an association between chronic environmental exposure to IMI, THX, or N-desmethyl-acetamiprid (DMAP), a metabolite of ACE, and an adverse human health effect (Carmichael et al. 2014; Keil et al. 2014; Marfo et al. 2015; Yang et al. 2014).

Imidacloprid Proposed Interim Registration Review Decision

...

Imidacloprid is a systemic insecticide that acts as an insect neurotoxin and belongs to a class of chemicals called the neonicotinoids which act on the central nervous system of insects. The chemical works by interfering with the transmission of stimuli in the insect nervous system.

Specifically, it causes a blockage of the nicotineric neuronal pathway. By blocking nicotinic acetylcholine receptors, imidacloprid prevents acetylcholine from transmitting impulses between nerves, resulting in the
