Immunological Memory and Protective Immunity: Understanding Their Relation. The immune system can remember, sometimes for a lifetime, the identity of a pathogen. Understanding how this is accomplished has fascinated immunologists and microbiologists for many years, but there is still considerable debate regarding the mechanisms by which long-term immunity is maintained.

Immunological memory and protective immunity ...

Persistent and durable immunological memory forms the basis of any successful vaccination protocol. Generation of pre-existing memory B cell and T cell pools is thus the key for maintaining protective immunity to seasonal, pandemic and avian influenza viruses. Long-lived antibody secreting cells (ASCs) are responsible for maintaining antibody levels in peripheral blood.

To understand this, you also have to understand ‘protective’ immunological memory cells. Some 23 years ago, we discovered the long-lived plasma cells in the bone marrow which are the cells secreting protective antibodies. 1 Such plasma cells when making autoantibodies can be pathogenic.

remain in the body for years even after the disease has subsided and, like a database, store all information about the pathogen that has been fought off.

Immunological Memory – DRFZ

Immunological Memory After an immune response, memory cells are produced. These lay dormant in the lymphatic system for many years. If they detect a pathogen with the specific antigen, they rapidly clone, and secrete antibodies.

Vaccination and Immunity: Immunological Memory ...

Immunological memory is defined by a pool of antigen-specific cells whose increased frequency enables rapid control of viral reinfection (Fig. 27.2). 28 Recent studies identified a population of

The Bone Marrow Protects and Optimizes Immunological ...

Immunological memory is often thought of as being mediated by conventional adaptive cells: B cells, and CD4 and CD8 T cells, that have differentiated to become “memory” populations. B cells through the production of antibodies and T cells through a variety of mechanisms are critical mediators of protection.
