International Atlas Powder Metallurgical Microstructure

Excerpted from International Atlas of Powder Metallurgical Microstructures. Metallographic preparation and inspection of powder metallurgical materials is a specific sector of general metallography. Therefore, standard handbooks should be consulted in the usual way also for powder metallurgical work. However, there is one peculiar aspects, which requires special attention: characterization and preservation of porosity in powder metallurgical materials.

Metallographic Equipment and Consumables for Metallography

Powder metallurgy (P/M) is now a mature commercial metal-forming technology with the intrinsic advantage of net or near-net shape capability. In applying the tenets of physical metallurgy to P/M materials, and in the particular context of metallography, one important variable must be considered, namely, porosity , , . The objectives of this contribution are twofold, namely, (i) to consider the implications of pores in the microstructure in relation to successful metallographic laboratory ...
