Introduction to Deep Learning with Keras. Keras is a high-level neural networks API, capable of running on top of Tensorflow, Theano, and CNTK. It enables fast experimentation through a high level, user-friendly, modular and extensible API. Keras can also be run on both CPU and GPU. Keras was developed and is maintained by Francois Chollet and is part of the Tensorflow core, which makes it Tensorflows preferred high-level API.

The most basic neural network architecture in deep learning is the dense neural networks consisting of dense layers (a.k.a. fully-connected layers). In this layer, all the inputs and outputs are connected to all the neurons in each layer. Keras is the high-level APIs that runs on TensorFlow (and CNTK or Theano) which makes coding easier.
