Introducing Aspen Plus V11 for Chemical Engineering Simulation

The iconic flowsheet simulator, such as Aspen Plus, allows predicting the behavior of a process using basic engineering relationships. The chemical process consists of chemical components, or different species, that are subject to physical or chemical treatment, or both.

Introducing Aspen Plus - Aspen Plus® - Wiley Online Library

ASPEN PLUS™ allows you to create your own process model, starting with the flowsheet, then specifying the chemical components and operating conditions. ASPEN PLUS™ will take all of your specifications and, with a click of the mouse button, simulate the model. The process simulation is the action that executes all necessary calculations needed to solve the outcome of the system, hence predicting its behavior.

INTRODUCTION TO ASPEN PLUS

In the Aspen Plus, there is an inbuilt model known as RADFRAC, which is meant for the simulation of the distillation columns. Water-methanol mixture with 0.5 mole fractionof each component was considered to get the maximum recovery (99.5%) of Methanol at top. The number of stages and the feed location was changed to suit our purpose.
