Introduction To Cryptography Solution

Eventually, you will extremely discover a supplementary experience and endowment by spending more cash. still when? accomplish you put up with that you require to get those all needs subsequent to having significantly cash? Why don't you attempt to get something basic in the beginning? That's something that will guide you to understand even more vis--vis the globe, experience, some places, later than history, amusement, and a lot more?

It is your completely own time to put it on reviewing habit. along with guides you could enjoy now is **introduction to cryptography solution** below.

Cryptography is the science of using mathematics to encrypt and decrypt data. Cryptography enables you to store sensitive information or transmit it across insecure networks (like the Internet) so that it cannot be read by anyone except the intended recipient.

The solution is $s \equiv 72729 \pmod{87037}$. Adding on multiples of $(p-1)/4 = 87037$ yields the four solutions $s \equiv 72729, 159766, 246803, 333840 \pmod{348148}$ to the original congruence. We can pick out which solution is correct from the relation $g^s \equiv v \pmod{p}$, i.e., the correct value of s should satisfy $113459s \equiv 185149 \pmod{348148}$.
