Solutions to B. Mendelson:  
Introduction to Topology.  
This book is meant to cover  
a basic topology course for  
undergraduates and I found  
it very approachable even  
with my limited background  
in pure math. Moreover,  
being about 200 pages long  
and published by Dover, it  
costs the equivalent of a  
cheap lunch. The exercises  
are (so far) not very long  
and complicated, so I just  
attempted to write and scan

In the second chapter  
Professor Mendelson  
discusses metric spaces,  
paying particular attention  
to various distance  
functions which may be  
defined on Euclidean  $n$   
-space and which lead to the  
ordinary topology. Chapter 3  
takes up the concept of  
topological space,  
presenting it as a  
generalization of the  
concept of a metric space.
