Lab Activity BACKGROUND.

Investigating Bird Beak Adaptations

Online Library Investigating Bird Beak Adaptations Lab

~~Lab Activity~~ BACKGROUND. Charles Darwin developed the Theory of Natural Selection based on his research of finches in the Galapagos Islands. He postulated that all species of finches on the islands descended from the same original species; however, due to natural occurrences, the finches were eventually isolated on the individual islands.

Adaptations are how a plant or
animal is built (its structure) or how it
behaves that allow it to survive and
reproduce in its environment.

Students will investigate adaptations
in birds using models of bird beak
shapes and different types of bird
“ food ” . They will understand the
