## *Malaria in Pregnancy*

Abstract. Background: Malaria in pregnancy carries a proven huge health burden; however, the economic challenges have not been properly evaluated in Nigeria. Methodology: The study was a descriptive cross-sectional hospital-based approach. A structured questionnaire was used to collect microeconomic data from pregnant women, on the medical and nonmedical cost of malaria to them.

*Malaria Journal | Articles*

Malaria Journal is aimed at the scientific community interested in malaria in its broadest sense. It is the only journal that publishes exclusively articles on malaria and, as such, it aims to bring together knowledge from the different specialties involved in this very broad discipline, from the bench to the bedside and to the field.

*Malaria Journal | Home page*

Abstract Malaria in pregnancy is one of the major causes of maternal morbidity worldwide, and leads to poor birth outcomes. There is a complex interaction between pregnancy and parasite—all favour the parasite and disadvantage the pregnant woman. Women who are semi-immune lose much of that immunity.

The severity of malaria in pregnancy is thought to be due to general impaired immunity plus a diminution of acquired immunity to malaria in endemic areas. Placental malaria occurs where Plasmodium falciparum -infected erythrocytes accumulate in the intervillous space of the placenta but may be rare or absent in the peripheral circulation.

*Malaria in Pregnancy. Learn about Malaria in Pregnancy ...*

Malaria during pregnancy is a major cause of maternal morbidity worldwide and leads to poor birth outcomes. Pregnant women are more prone to complications of malaria infection than nongravid women. Prevention involves chemoprophylaxis and mosquito avoidance. Treatment involves antimalarial drugs and supportive measures.

*Malaria in pregnancy: Prevention and treatment - UpToDate*

Malaria infection during pregnancy is a significant public health problem with substantial risks for the pregnant woman, her fetus and the newborn child.. The symptoms and complications vary according to malaria transmission intensity in the given area and the individual's level of acquired immunity.

neonate; the infection contributes to as much as 15% of maternal anemia, 14% of low birth weight infants, 30% of preventable low birth weight, 70% of intrauterine growth retardation, 36% of premature deliveries, and 8% of infant mortality.

*Malaria during Pregnancy: Epidemiology, Current Prevention ...*

Malaria in pregnancy increases the risk of maternal and fetal anaemia, stillbirth, spontaneous abortion, low birth weight and neonatal death. Infants born to mothers living in endemic areas are vulnerable to malaria from approximately 3 months of age, when immunity acquired from the mother starts to wane.

*Protecting malaria high-risk groups*

With regard to malaria, perceived susceptibility is related to two factors: (1) the perceived propensity to develop clinical malaria due to idiosyncratic features of the person (pregnant women, children, immune-compromised persons); and (2) the perceived level of exposure.

*Malaria in Pregnancy: What Can the Social Sciences Contribute?*

Pregnancy-associated malaria (PAM) or placental malaria is a presentation of the common illness that is particularly life-threatening to both mother and developing fetus. PAM is caused primarily by infection
