Sizing a Knockout Drum - Pipelines, Piping and Fluid ...

The second step in sizing a knock-out drum is to consider the effect any liquid contained in the drum may have on reducing the volume available for vapor/liquid disengagement.

This liquid may result from (1) condensate that separates during a vapor release or (2) liquid streams that accompany a vapor release.

$k = 0.107$ at a gauge pressure of 7 bar.

Subtract 0.003 for every 7 bar above a gauge pressure of 7 bar. For glycol or amine solutions, multiply above k values by 0.6 – 0.8. Typically use one-half of the above k values for approximate sizing of vertical separators without mesh pads.
