parallel language and compiler. 1. PARALLEL LANGUAGE AND COMPILER. 2. INTRODUCTION The environment for parallel computers is much more demanding than that for sequential computers The programming environment is a collection of software tools and system software support To break this hardware/software barrier , we need a parallel software environment Which provide better tools for user to implement parallelism and to debug programs.

The topics covered include languages and language extensions for parallel computing - a status report on CONSUL, a future-based parallel language for a general-purpose high-parallel computer; COOL, blackboard programming in shared Prolog, refined C,

## **(PDF) Languages and Compilers for Parallel Computing ...**

Source-to-source compilers are a type of compiler that takes a high-level language as its input and outputs a high-level language. For example, an automatic parallelizing compiler will frequently take in a high-level language program as an input and then transform the code and annotate it with parallel code annotations (e.g. OpenMP ) or language constructs (e.g. Fortran's DOALL statements).

Workshop description. LCPC is a leading venue for cutting-edge research on all aspects of parallel programming systems. About this Event. Since its inception in 1988, the Workshop on Languages and Compilers for Parallel Computing (LCPC) has been a leading venue for cutting-edge research on all aspects of parallel programming systems – from parallel programming models, languages, compilers, runtimes and tools, to results related to new parallel applications or systems.
