binding constraints in the future creates a feedback that can keep agents out of the market even if the risk premium is high.

~~Learning and Stock Market Participation~~

These results suggest that learning and short-sale constraints can simultaneously generate limited participation, higher risk premium, and insignificant contemporaneous correlation between the stock return and the income of those who do not participate in the stock market.

Based on a novel survey data set from France, recent empirical literature (Arrondel, et. al., 2013) establishes that stock ownership and stock-market participation are strongly correlated with individuals ' subjective expectations of stock market returns, which are in turn strongly correlated with the information set of the potential investors.

~~CiteSeerX — Learning, networks and stock market participation~~

Abstract. This paper explores how institutional quality affects stock market

File Type PDF Learning And Stock Market Participation

participation through its effect on individual trust. We develop a theoretical model in which higher institutional quality is likely to lead to a higher level of trust, and when the level of trust is sufficiently high, agents choose to invest in the stock market.
