Lesson 7: Divide with Fractions Student Book pages 58 - 69 Apply and extend previous understandings of multiplication and division to divide fractions by fractions.

Lesson 7: Divide with Fractions - Ready Common Core

Essentially, division asks “ how many ” . It ’ s important to verbalize that no matter what units we have(as long as they are same units) , the answer is still the same. Therefore, when working with division of fractions, we can utilize common denominators to get our same units and be able to divide just the numerators. (SMP 7).

Therefore, when working with division of fractions, we can utilize common denominators to get our same units and be able to divide just the numerators. (SMP 7). Students can use a think-pair-share to discuss their thoughts on each statement.

Sixth grade Lesson Dividing Fractions | BetterLesson

Dividing whole numbers by fractions. Interpret and compute quotients of fractions, and solve word problems involving division of fractions by fractions, e.g., by using visual fraction models and equations to represent the problem. For example, create a story context for  $(2/3) \div (3/4)$  and use a visual fraction model to show the quotient; use the relationship between multiplication and division to explain that  $(2/3)$

When you divide by a fraction, for every whole, you're making 3 jumps. So that's why when you divide by this fraction, or whatever is in the denominator, you multiply by it. And now when the numerator is greater than 1, every jump you're going twice as far as you did in this first one right over here.
