computer. **lesson practice c dividing polynomials** is understandable in our digital library an online right of entry to it is set as public correspondingly you can download it instantly. Our digital library saves in multipart countries, allowing you to acquire the most less latency times to download any of our books later this one. Merely said, the lesson practice c dividing polynomials is universally compatible when any devices to read.

LESSON Reteach 6-3 Dividing Polynomials (continued)
When the divisor is in the form $(x + a)$, use synthetic division to divide. Divide: $(2x^2 + 10x + 3) \div (x + 3)$. Step 1 Find a . The divisor is $(x + 3)$. So, $a = -3$. Step 2 Write a in the upper left corner. Then write the coefficients of the dividend. $2 \quad 10 \quad 3$ Step 3 Draw a horizontal line.

Here are the 3 Types of Dividing Polynomial Questions

Download Ebook Lesson Practice C

Dividing Polynomials

Your Students Will See. 1: To divide monomials use the laws of exponents in division. 2: To divide a polynomial by a monomial, we use $(a + b) / c = a/c + b/c$. 3: The last rule is to divide a polynomial by another polynomial with at least two terms. This type of division is applied only when the degree of the polynomial in the numerator is greater than or equal to the degree of polynomial in the denominator.

Write the quotient. Divide by using synthetic division.

LESSON Practice A Dividing Polynomials - crunchy math

Find the quotient: $(2x^2 - 5x - 3) \div (x - 3)$. $(2x^2 - 5x - 3) \div (x - 3)$.

Solution. Write it as a long division problem. Be sure the dividend is in standard form.

Divide $2x^2$ by x . Put the answer, $2x$, in the quotient over the x term. Multiply $2x$ times $x - 3$. Line up the like terms under the dividend.
