The lid-driven cavity problem has long been used a test or validation case for new codes or new solution methods. The problem geometry is simple and two-dimensional, and the boundary conditions are also simple. The standard case is fluid contained in a square domain with Dirichlet boundary conditions on all sides, with three stationary sides and one moving side (with velocity tangent to the side).

Lid-driven cavity. Note: CFD-calculations have been deactivated in version 2.7 due to unsatisfactory results. A new approach is being pursued. The lid-driven cavity is a well-known benchmark problem for viscous incompressible fluid flow. The geometry at stake is shown in Figure 27. We are dealing with a square cavity consisting of three rigid walls with no-slip conditions and a lid moving with a tangential unit velocity.

The lid-driven cavity (LDC) is a common test or bench-mark problem in computational fluid dynamics (CFD) particularly as one that critically tests the accuracy of the advection (convective acceleration) scheme used for the computations. The figure that follows is an example calculation that illustrates the essential features of the computation which consists of a rectangular cavity, a square one in this case, where the (Newtonian) fluid inside is set in motion by dragging the upper edge of ...

Lid Driven Cavity - vermontveterinarycardiology.com

Numerical solution of the 2D incompressible steady Navier-stokes equations is obtained for lid-driven square cavity case for Reynolds Numbers $100 < Re < 5000$, using Finite Volume Method with primitive variable formulation on a uniform grid. Convective terms are discretized using second order central differencing scheme, and SIMPLE algorithm is used to decouple velocity and pressure.

Lid Driven Cavity Fluent Solution

The lid driven cavity is a classical problem and closely resembles actual engineering problems that exist in research and industry areas. The vorticity equation will be solved utilizing a forward time central space (FTCS) explicit method. The streamline equation is solved using the successive over relaxation method.
