Knowing what faulty vacuum hoses look like is an important part of keeping your car in good condition. Many of these hoses control your car's idle, emissions components and environmental controls such as your heat. This article will tell you how to check engine vacuum hoses.

**How to Check Engine Vacuum Hoses: 4 Steps (with Pictures)**

Step 1: Detach the suspect hose from the component. Make sure that the hose is still connected to the engine vacuum. For example, if you are checking the Exhaust Gas Recirculation (EGR) hose, unplug it at the EGR valve. Step 2: Attach the vacuum gauge to the hose. Make sure the hose and gauge are sealed properly, otherwise you will get a false reading.

If the engine smooths out as you spray water, you've found the vacuum leak; you may also see bubbles on the location of the vacuum leak. Note: To use a hose (or mechanic's stethoscope), place one end of the hose against your ear and move the other end of the hose around the edge of the intake manifold gasket and carburetor or throttle body gasket.

**How to Find and Fix a Vacuum Leak—AutoAddict—A—**

Well it very much depends on which car and which hose (s), but basically you will find them between the brake booster (brake servo) and the intake system (usually throttle body or manifold) and the rocker cover and the intake system (for crank case ventilation). There are sometimes others for various other purposes (such as EVAP for the charcoal canister) but in the main, look for hoses that join the intake system — or — (particularly if you don't have a naturally aspirated engine) hoses ...

**Location Of Vacuum Hoses On A Nissan Pathfinder**

There are several methods you can use to identify a vacuum leak. Start with a vacuum hose diagram, which you can find in a repair manual or sometimes on a sticker under the hood. Using one of the following methods, finding the vacuum leak might manifest itself as a change in engine speed or idle smoothness.

**Engine Vacuum Leak: Symptoms and Solutions**

Shown above is a photo of a dislodged plastic vacuum hose for an early MINI Cooper (2002 - 2005 R52 supercharged type). Often when a technician removes the air intake box or the plastic intake duct, this hose is overlooked. If enough tension is applied to this hose without disconnecting it from the air duct, it will break.

The number of hoses your engine has and their locations vary widely depending on your specific engine. Use a flashlight while you are looking at your engine so that you can see as many areas as possible. Small cracks in a hose can cause a vacuum leak. A visual inspection may not be able to find this type of small leak.

I choose to use high-quality silicone hoses for the new lines, like this from Ebay (~GBP 2.65 per meter). Silicone is age-resistant and will last the lifetime of the car. Also, I like the color of the blue hoses, however you can buy them in any color depending on your preferences. I highly recommend replacing the vacuum lines in your Saab.
