Cooling Load

Calculation Example.

To calculate the estimated HVAC load for a house with 2,500 square feet, 12 windows, and 3 exterior doors

occupied by 4 people, simply plug it into this formula: $2,500 \times 25 = 62,500$ base BTU. $4 \text{ people} \times 400 = 1,600$. $12 \text{ windows} \times 1,000 =$
