Equations Myint
Now, using this value of the integrating factor, we can find out the solution of our first order linear differential equation. Now integrating both the sides with respect to x , we get:

Linear Differential Equation (Solution

Read Free Manual Solution Linear Partial Differential & Solved Examples)

The general form of a linear differential equation of first order is which is the required solution, where c is the constant of integration. $e^{\int P dx}$ is called the integrating factor. The solution (ii) in short may also be written as $y \cdot (I.F) = \int Q \cdot (I.F) dx + c$.
