Masonry Beams □ Reinforced masonry beams and lintels are horizontal members used to span the openings in masonry walls. □ Bond beams are mostly located at floor and roof levels where their main function is:

- 1-To distribute vertical loads
- 2-To tie the elements of the building

Conventionally, the compressive strength of hollow block masonry built with the

Online Library Masonry Structures Behavior And

Design
Cores filled with concrete is taken to be the sum of the strengths of the hollow block and the concreted core tested separately. However, even when the materials are of approximately the same nominal strength, this rule is not always reliable as there can be a difference in the lateral strains of the block and fill
