By the end of this course you will be able to derive, interpret, solve, simulate, understand, discuss and critique discrete and differential equation models of biological systems. Textbook This course will follow the first several chapters of: Leah Edelstein-Keshet Mathematical Models in Biology Magraw-Hill, 1988.

Introduction to Mathematical Biology (MATH 463)

This book represents the unique perspective on mathematical biology of Segel and his co-author Leah Edelstein-Keshet (author of the popular SIAM book, Mathematical Models in Biology). It introduces differential equations, biological applications, and simulations, with emphasis on molecular events (biochemistry and enzyme kinetics), excitable systems (neural signals), and small protein and genetic circuits.
