MATLAB Central

The diode is a semiconductor device that is controlled by its own voltage V_{ak} and current I_{ak} .

When a diode is forward biased ($V_{ak} > 0$), it starts

Download Free Matlab Code

to conduct with a small forward voltage V_f across it. It turns off when the current flow into the device becomes 0. When the diode is reverse biased ($V_{ak} < 0$), it stays in the off state.
