Use MATLAB to analyze data, develop algorithms, and create applications. Solve problems for a range of applications, including signal processing and communications, image and video processing, control systems, and test and measurement.

MathWorks - Solutions - MATLAB & Simulink

$Y = \text{solve}(\text{eqns}, \text{vars})$ solves the system of equations eqns for the variables vars and returns a structure that contains the solutions. If you do not specify vars, solve uses symvar to find the variables to solve for. In this case, the number of variables that symvar finds is equal to the number of equations eqns.

View MATLAB Command When solving a system of equations, use multiple output arguments to assign the solutions directly to output variables. The order in which the solver returns the solutions follows the order in which you specify the variables.
