In mathematics, the mean value theorem states, roughly, that for a given planar arc between two endpoints, there is at least one point at which the tangent to the arc is parallel to the secant through its endpoints. It is one of the most important results in real analysis. This

Find the mean value of  $f(t) = t^2$  over the interval  $2 \leq t \leq 5$ . Use Key Point 2 with  $a = 2$  and  $b = 5$  to write down the required integral: Your solution mean value = Answer  $\frac{1}{5} \int_2^5 t^2 dt$  Now evaluate the integral: Your solution mean value = Answer  $\frac{1}{5} \int_2^5 t^2 dt = \frac{1}{5} \left[ \frac{t^3}{3} \right]_2^5 = \frac{1}{5} \left( \frac{125}{3} - \frac{8}{3} \right) =$
