A mechanical seal can now be defined as a device which prevents fluid leakage where a rotating shaft extends through a pressurized vessel. Application information Before design and material selections can be made at least the following conditions under which the seal will perform must be known: 1. Fluid to be sealed. 2. Pressure of the fluid. 3.

When handling volatile organic compounds (VOC), seal selection is often determined by specific gravity and maximum allowable emission levels. Lower specific gravity products, combined with parts per million VOC emissions allowable, dictate not only if a mechanical seal is required, but also if double mechanical seals are required. Federal

Mechanical Seals Technical Manual

- The mechanical seal faces are obviously the most critical sealing point of a mechanical seal assembly.
- Although the faces can be manufactured from a myriad of different materials, one is typically carbon, while the other is usually a hard material. (i.e. Alox (Aluminum Oxide Ceramic), Tungsten Carbide, Silicon Carbide, etc.)
