Meiosis. A modified type of cell division in sexually reproducing organisms consisting of two rounds of cell division but only one round of DNA replication. It results in cells w/ half the number of chromosome sets as the original cell. Meiosis I. The first division of a two-stage process of cell division in sexually reproducing organisms that results in cells with 1/2 the number of chromosome sets as the original cell.

Initially, discuss the goal of the process. Explain that meiosis serves to produce reproductive cells with exactly half the number of chromosomes, and that once these haploid cells are fused during fertilization, a complete set of genetic instructions for a new individual is formed. Meiosis starts in a cell with chromosomes in pairs.
