You use formulas to perform mathematical
functions on cells. There are two basic
ways of writing formulas available:
[ranged syntax] or [simple syntax]. A
[syntax] is simply a way of expressing or
writing something. It is important to note
that these two syntaxes are not mutually
exclusive!

Functions Formulas Quick Useful Formulas & Functions (Microsoft Excel 2013) Course

Press the up-arrow key once to move the cell cursor back to A2 and examine the formula in the formula bar. In cell A3, type = (2+4)*3 and press Enter. In this case, the parentheses forced the addition to occur first (2 plus 4 equals 6), and then 3 was multiplied for a total of 18.

~~How to Write Formulas in Excel 2013~~ dummies

Functions are entered into a formula in a cell in much the same way as a cell reference or data value. All formulae must be started with an equals sign, followed by the calculation. This may just be a function or a function embedded in other data values and/or cell references.
