employer must follow the regulations of 1926 Subpart CC. Follow these three steps every time a crane is operated.

~~Cranes & Power Lines Don't Mix~~

NEVER, when using cranes and/or equipment near energized power lines of 50,000 volts (50kV) or more, get closer than 10 feet plus 4 inches for each 10kV over 50kV. NEVER use cranes alone where it is difficult by visible means to maintain the desirable clearance. NEVER forget that overhead power lines could be energized.

~~Crane and Derrick Safety I
Power Line Safety ...~~

Electricity - overhead power lines What you need to do. The law says that any work near electric overhead power lines must be carefully planned and carried out to avoid danger from accidental contact or close proximity to the lines.. The precautions necessary will depend on the nature of the work at the site and will be required even when work near the line is of short duration.

~~Construction — Overhead
power lines industry health
& safety~~

This is nuts. Its amazing

how close the people in the
background get.

~~Crane hits power line~~

YouTube

WARNING: Contact with an overhead power line may cause the power to 'trip out' temporarily and it may be re-energised automatically, without warning. Your local Distribution Network Operator (DNO) can generally supply stickers describing emergency procedures and containing contact numbers that can be stuck in the cabs of vehicles likely to be used near overhead power lines.

~~(caught ...)~~

If the crane operator is
working near a power line
that carries 50KV of
current, then he should be
at least 10 feet away from
the lines. In case, the
power line is carrying more
than 50 kV but less than
350KV, then the crane should

be at least 20 feet away from the power line.

~~How to operate your crane safely near the power lines?~~

CRANE SAFETY. Case 1: A 28-year old construction worker was holding onto a steel ladder being moved by a telescoping boom crane. As the crane's boom was swung in the direction of 7,200 volt power lines, the cable contacted the lines and the worker was electrocuted.

Case 2: A co-owner of a steel erection company and three workers were using.

~~CRANE SAFETY — J.E. Spear Consulting~~

Operate cranes at a slower-

~~Safety Council~~
than-normal rate in power line areas. Use caution when moving over uneven ground that could cause the crane to weave or bob into power lines. Use caution near long spans of overhead power lines, since wind can cause the power lines to sway back and forth and reduce the clearance between the crane and the power line.

~~Crane Safety — Safety
Precautions for Working Near~~

~~...~~

The machinery or vehicle will become 'live' at the same voltage as the power lines contacted. The electricity will attempt to pass through the vehicle to
