Sensor fusion - Wikipedia

Multisensor data fusion is the process of acquiring multiple data sets from multiple sensors with the intent of building a more precise data set. Often considered more accurate than single-sensor data, this type of information fusion has many applications.

What Is Multisensor Data Fusion? - wiseGEEK

Low-level data fusion combines several sources of raw data to produce new raw data. The expectation is that fused data is more informative and synthetic than the original inputs. For example, sensor fusion

Read Online Multi Sensor Data Fusion With Matlab

is also known as (multi-sensor) data fusion and is a subset of information fusion. The concept of data fusion has origins in the evolved capacity of humans and animals to incorporate information from multiple senses to improve their ability to survive.

Read Online Multi Sensor Data Fusion With Matlab

Multi-sensor data fusion offers a solution to this issue as it seeks to combine data to perform inferences that may not be possible from a single sensor. Several MOA methods exist: Nearest Neighbour, (Joint) Probability Data Association Filter ((J)PDAF) or Multi-Hypothesis Tracking (MHT), all defined on the Bayesian
