Multidimensional Poverty Measurement & Analysis

Multidimensional Poverty Indices typically use the household as their unit of analysis, though this is not an absolute requirement. A household is deprived for a given indicator if they fail to satisfy a given 'cutoff'. A household is assigned a 'deprivation score' determined by the number of indicators they are deprived in and the 'weights' assigned to those indicators. Each dimension is typically given an equal weighting, and each indicator within the dimension is also typically weighted equal

Multidimensional Poverty Measurement | SpringerLink

Abstract Many authors have insisted on the necessity of defining poverty as a multidimensional concept rather than relying on income or consumption expenditures per capita. Yet, not much has actually been done to include the various dimensions of deprivation into the practical definition and measurement of poverty.

The Measurement of Multidimensional Poverty | SpringerLink

The concept of multidimensional poverty is no exception. It is now generally accepted that poverty is more than just the lack of income; the Open Working Group on the Sustainable Development Goals, for example, talks of ending 'poverty in all its forms everywhere' (emphasis added).
