~~Natural Selection Packet Answers~~

evolution by natural selection.

Evolution by natural selection takes  
place over many, many generations.

Evolution by natural selection leads  
to adaptation within a population.

The term evolution by natural  
selection does not refer to individuals  
changing, only to changes in the  
frequency of adaptive characteristics  
in the population as a whole.

Natural selection is a God-ordained process that allows organisms to survive. It is an observable reality that occurs in the present and takes advantage of the variations within the kinds and works to preserve the genetic viability of the kinds. Natural Selection and New Information. Natural selection cannot generate brand new genetic information.
