Linear Regression Analysis using SPSS Statistics Introduction. Linear regression is the next step up after correlation. It is used when we want to predict the value of a variable based on the value of another variable. The variable we want to predict is called the dependent variable (or sometimes, the outcome variable).

Linear Regression Analysis in SPSS Statistics - Procedure ...

After you bring data into SPSS Statistics, the next step is to select a procedure. The Analyze menu contains a list of reporting and statistical analysis categories.

How to Run an Analysis in SPSS Statistics - dummies

If histograms do show unlikely values, it's essential to set those as user missing values before proceeding with the next step. Inspect Descriptives Table. If variables contain any missing values, a simple descriptives table is a fast way to evaluate the extent of missingness. Our histograms show that the data at hand don't contain any missings.

SPSS Multiple Regression Analysis in 6 Simple Steps

10 SPSS Step-by-Step 5. Click OK. SPSS brings the output window to the front displaying two tables and the clustered bar chart you requested. Take a moment to review the contents of the tables and the chart. Notice that the red arrow next to the title Crosstabs corresponds to the Crosstabs icon in the left pane of the window. The left pane
