NFPA diamond hazard rating system This NFPA hazard rating system includes three color codes and five intensity levels. Each color code (blue, red, and yellow) of the hazard rating system corresponds to a hazard: health, fire, and instability (denotation or chemical change). Within each colored section, a numerical rating is given to the hazard.

While NFPA codes cover several aspects of flammable materials pertinent to SDS's, perhaps the most significant is the NFPA 704 Hazard Identification ratings system (the familiar NFPA "hazard diamond" shown on the right) for health, flammability, and instability. The NFPA's Fire Protection Guide to Hazardous Materials, 2010 edition includes NFPA 704, "Standard System for the Identification of ...

**The MSDS HyperGlossary: NFPA**

NFPA 704 is the standard that is intended to provide a simple, readily recognized, and easily understood system of markings. These markings will provide a general idea of the hazards of a material and the severity of these hazards as they relate to emergency response. In more specific terms the objectives of the system are to:
