Suggest a value of constant k, so that the iteration formula $x = x + k(x^2 - 3)$ may converge at a good rate, given that $x = 3$ is a root. Sol. Formula $x = f(x)$ where $f(x) = x + k(x^2 - 3)$ will converge if $|f'(x)| < 1$ or $-1 < f'(x) < 1$. i.e.,if $-1 < 1 + 2kx < 1$ Moreover, the convergence will be rapid if $f'(a) \rightarrow 0$.

Descriptive statistics are tabular, graphical, and numerical methods by which essential features of a sample can be described. Although these same methods can be used to describe entire populations, they are more often applied to samples in order to capture population characteristics by inference. We will differentiate between two main types of

Overview. Whereas statistics and data analysis procedures generally yield their output in numeric or tabular form, graphical techniques allow such results to be displayed in some sort of pictorial form. They include plots such as scatter plots, histograms, probability plots [disambiguation needed], spaghetti plots, residual plots, box plots, block plots and biplots.

Quantitative methods emphasize objective measurements and the statistical, mathematical, or numerical analysis of data collected through polls, questionnaires, and surveys, or by manipulating pre-existing statistical data using computational techniques. Quantitative research focuses on gathering numerical data and generalizing it across groups of people or to explain a particular phenomenon.
