introduces a weakened or inactive version of the infection into the body. The person's immune system reacts to the vaccine by producing antibodies (molecules in the blood that attack and destroy the infection).

Smallpox and the story of vaccination | Science Museum

1. A person becomes immune to a disease when the body has been exposed to it either through illness or vaccination. The immune system develops antibodies to the disease so that it cannot make you sick again. Immunization describes the actual changes your body goes through after receiving a vaccine.
